Projects

Luminate

Luminate is a native Android application that connects to the Guardian's Counted Rest API to show the people killed by law enforcement. The results are based on the criterion entered in the app such as the state name.

PayUp

PayUp is a native Android CRUD application that keeps track of debts owed. Enter the name and amount owed and you can also set the date. Once the debt is payed you can delete the entry.

Skills

Android Development, Java, Git, RESTful APIs, SQLite Databases, HTML & CSS, JavaScript, Unity3D, Augmented Reality, Adobe Suite (Photoshop & Illustrator.)

Experience

July 2015-August 2015
The Knowledge House
Web Design Teacher

Tutored High School students in HTML, CSS & JavaScript. Focused on the creative aspect rather than best practices. Taught students how to use and the importance of Version Control Software.

August 2014- July 2015
MassIdeation
Developer

Collaborated with other developers to create a mobile game - RunDog and released it for Android and iOS. Responsible for the movement in the game as well as creation of the art assets. Attended events to showcase work created by company.
